

Collective Farm In Tomaszyn

OSTOJA NATURY

Which is the product we wanted to be developed ?

What is Ostoja Nature?

Ostoja Nature is an agricultural ecosystem of tomorrow, the effect of a synergy of traditional thinking and a technological approach.

Methods tested over the ages, such as crop rotation, raised seedbeds, moon wood or home recipes are refreshed and implemented using technological innovations of our times.

While creating Refuge of Nature's ecosystem, we are inspired by nature's already existing solutions. Just as in a prehistoric forest circuit, waste is nonexistent, and our goal is to create an ecosystem designed to provide economic efficiency with minimal influence on the environment.

Refuge of Nature ecosystem - plan from 2017

Healthy food farm

Year-round production of ecological food

Health farm

anti-aging, trainings, diet and supplementation

Innovation farm

Concept of a farm of the future

Culture Farm

Communication platform and educational infrastructure

Green Energy Farm

Producing energy from organic waste, plants and other renewable resources

BioTech

The BioTech event aims to raise awareness among rural residents by promoting natural farming methods, presenting and popularizing modern technological solutions.

Implementation of scientific achievements into agricultural practice significantly affects the development, innovation and competitiveness of agriculture.

OSTOJA NATURY

What assets did we have to develop that product?

Start with smart approach

Our 'smart' approach relates from the beginning to our openness to those who would like to cooperate with us or to join us. This approach applies both to people that come to us as partners as well as specialists that we look for. It can be understood as a "plug-in" system, which allows other to join us as well as allows us to join existing networks.

Give us “green-five”! and join us!

If you think that our idea is close to your vision...
If you would like to do more for yourself and the world...

If you have capital, real estate in the Olsztynek district or
have qualifications that can help develop our initiative,
contact us.

You will definitely find a place for yourself in the Refuge.

Strategy

Ostoja Vilage 3.0

The entire process of creating the strategy is based on systematic cooperation with partners. What we propose is the result of many discussions, working informal and formal meetings. The strategy was developed over a long period of time, step by step, element by element. It is discussed in detail, and the high commitment of the partners from the beginning of the entire process of its creation makes all partners feel like full participants in its creation and implementation.

The Ostoja Natury program - Ostoja Wioska 3.0 assumes the preparation of a complete "know how" on the main aspects of the functioning of an organic farm, including:

- production methods adapted to soil and climatic conditions
- a set of technological solutions
- offers of an optimal machine park
- robotization and automation of agricultural production and processing
- building a modern distribution platform enabling interaction with customers and sales direct
- access to the seed bank (BIO seed material)
- construction of a model, self-sufficient, waste-free habitat for rural farms
- implementation and optimization of a working business model
- building a group of independent producers and cooperatives based on a common distribution platform, communication, technology, knowledge bank and seeds

Choosing form of organization as a part of our solution.

They are popular in both rich and impoverished countries, and the more developed a population is, the more collectives there are. According to an index created by Tom Crompton of [Common Cause Foundation](#) for UN, the top ten are Brazil, Norway, Canada, Spain, Finland, Argentina, Iceland, France and Great Britain. In most of these countries, around $\frac{1}{4}$ of the population belong to a collective.

Refuge Road Map 2017

Purchasing land
Formalities
Communication
Refuge TV launch

2018

Beginning production
Joining research programs
Organizing Ostoja production headquarters
Building a village of disappearing trades

2019

Emission of "ecological bonds"
Building Aquaponica
Building a biogas plant
Buying farms machines

2020

Infrastructure investments for self sufficient, waste free habitat for rural households and the educational program

2021

OSTOJA NATURY

What assets we didn't have ?

Need is the mother of invention

At the beginning we developed a strategy and formed a group of enthusiasts and professionals to carry out our project, but we were lacking many essentials, like:

- capital
- land
- work force
- infrastructure
- equipment
- institutional credibility
- trust of customers

also we were not eligible for any public or EU funding (short history)

OSTOJA NATURE

How are we making it!

Why are we a collective?

A collective is a fair and economically effective system, where everyone plays an important part.

We are partners

We are all co-owners managing an enterprise and beneficiaries of its activity.

We work for ourselves

Our collectives' goal is fulfilling the economical, social and cultural needs of its members.

We focus on people

In a collective, the person, not the capital is most important-
"one person, one vote."

We create a community

We work together and share knowledge and experience.

Benefits for members

Multiply your capital

Every member is entitled to a share in Refuge's earnings proportionally to shares. Interest on shares is not more than 5% on a yearly basis.

Employment for members first

The collective members have a priority before rented workers on fair employment terms.

You get hands-on influence

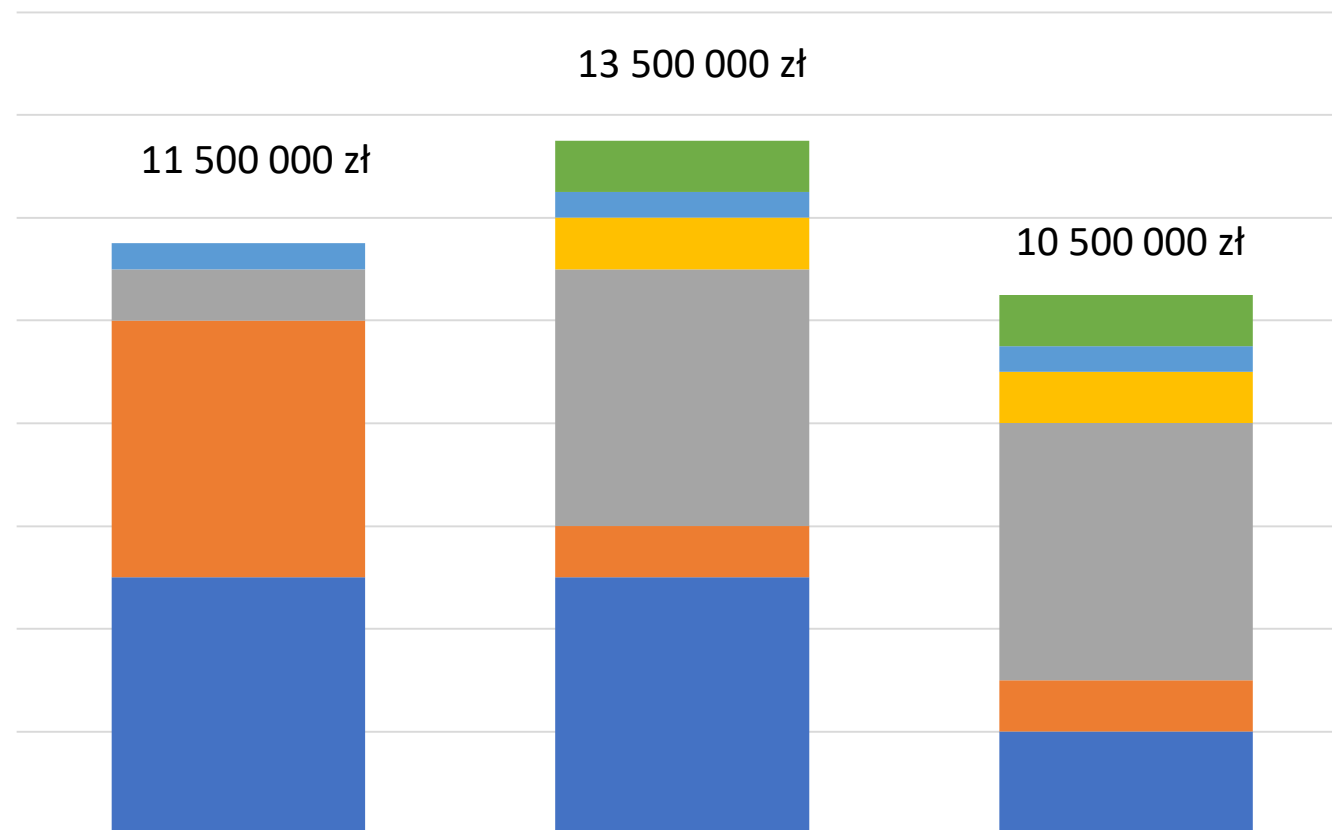

As a collective member you can influence the strategy and lifecycle of the collective through a vote at the general meetings.

Priority of purchase

The members have priority to use services and buy the collective's products.
